Summary

2026 **Computer Science** graduate who builds full-stack web applications on the **MERN Stack** (MongoDB, Express.js, React.js, Node.js) and **RAG-based AI services**. Writes **C++**, **Java**, **Python** and **JavaScript**; designs **RESTful APIs** with **JWT authentication** over **MongoDB** and **PostgreSQL**, and ships through **CI/CD** pipelines. Solid grounding in **Data Structures & Algorithms** and **object-oriented programming**.

Education

Graphic Era Hill University, Dehradun — **2022 – 2026**
Bachelor of Technology in Computer Science & Engineering — *CGPA: 7.1/10*

Ashoka Girls Senior Secondary School, Sirhind — **2021 – 2022**
Senior Secondary (Class XII) – Physics, Chemistry, Mathematics — *91.2%*

Projects

ICON Store – Full-Stack MERN E-Commerce Platform | *MongoDB, Express.js, React.js, Node.js, Mongoose, JWT* **GitHub**

- Developed a **full-stack e-commerce platform** on the **MERN Stack** serving **3 roles** (customer, seller, admin) with **role-based access control** via **JWT authentication** and **bcrypt** password hashing.
- Architected **14 RESTful API endpoints** across **4 route modules** and **4 Mongoose models** for product search, filtering, wishlist, and cart, with **MongoDB** indexing for efficient catalogue queries.
- Engineered an Admin dashboard with full **CRUD operations** over users, sellers, and orders; automated builds and deployment through a **CI/CD pipeline**.

CinderPeak – Open-Source C++ Graph Library | *C++, Google Test, GitHub Actions, CI/CD* **GitHub**

- Analyzed an open-source **C++ graph library** implementing **4 core algorithms** (BFS, DFS, Dijkstra, MST) across directed, undirected, and mixed graph types through a templated API.
- Traced **3 graph representations** – adjacency lists, adjacency matrices, and hybrid CSR/COO – through a modular **C++** codebase built on **smart pointers** and **STL containers**.
- Reviewed **4 Google Test unit suites** and the project's **GitHub Actions** CI workflows across unit and integration test layers.

Doc Intelligence – RAG-Based PDF QA System | *Node.js, Express.js, PostgreSQL, pgvector, BullMQ* **GitHub**

- Built a **retrieval-augmented generation (RAG)** service that answers natural-language questions over uploaded PDFs, chunking documents into **400-token** passages with **60-token overlap** that never span a page, so every answer cites an exact source page.
- Implemented **semantic search** over **1024-dimensional** vector embeddings in **PostgreSQL** with **pgvector**, retrieving **top-8** chunks by cosine distance via an **IVFFlat** index, and offloaded parsing and embedding to background workers using **BullMQ**.
- Designed a **provider-agnostic LLM layer** supporting **2 interchangeable providers** (Gemini, Claude) without application code changes; exposed functionality through **RESTful APIs** on **Express.js**.

Open Source Contribution

KubeStellar – CNCF Sandbox Project (Multi-Cluster Kubernetes Configuration Management) **Pull Request**

- Submitted a documentation fix via **pull request** to **KubeStellar**, a **CNCF Sandbox** project for multi-cluster configuration management across edge, multi-cloud, and hybrid cloud; change was reviewed by maintainers and **merged** (Mar 2025).

Technical Skills

Languages: C, C++, Java, Python, JavaScript, SQL

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Material UI

Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, BullMQ

Databases: MongoDB, PostgreSQL, pgvector, MySQL, Firebase

AI & ML: Retrieval-Augmented Generation (RAG), Vector Embeddings, Semantic Search, LLM APIs (Gemini, Claude)

Tools & DevOps: Git, GitHub, Linux, Docker, CI/CD, GitHub Actions, Google Test

Coursework: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks, System Design

Honors & Achievements

- **Hack2Hustle – National Hackathon, Masters' Union (May 2025):** Ranked in the **Top 30 out of 3000+** participants; delivered a working software solution under competitive time constraints.
- **HackWith India – National Hackathon (Apr 2025):** Placed in the **Top 50 out of 2000+** participants in a national-level virtual hackathon.
- Solved **200+ Data Structures & Algorithms** problems on **LeetCode** and other competitive programming platforms.
- **AWS Solutions Architecture Job Simulation (Forage, Sep 2025):** Completed a cloud architecture design simulation using **AWS** services including **EC2, S3, IAM**, and load balancing.
- **Google Cloud Arcade Program:** Completed labs on **GCP** infrastructure fundamentals covering **Compute Engine, Cloud Storage**, and **IAM**.
- Mentored peers in building and deploying **MERN Stack** applications covering React.js, RESTful APIs, Node.js, and Express.js.
